Chatbot Prototypes

Base44 Chatbot Solution

https://beat-boredom-bot.base44.app/

The above is the final solution that our team gave for the Chatbot. It is hosted on Base44 and is publicly accessible (Base44, n.d.).

Group Work Documentation

Team 1 Documentation - Google Docs (Yu et al., 2026)

The above is the detailed discussion the team used to discuss with each other. It listed brainstormed ideas, selected topics, and tested platforms such as ChatGPT, Mizou, and Base44. We decided to build Boredom Buster AI to help find enjoyable activities.

Boredom Buster AI Features

Its features include a 3D robot, dynamic expressions and gestures, interactive mouse animations, and intelligent conversation ending. Check it out using the link at the beginning.

Project Brief Description

Chatbots can better understand user needs (Adamopoulou & Moussiades, 2020). Our group started the project with brainstorming, with each of us provided ideas for a chatbot or assistant; then we discussed and picked the Boredom Buster AI Chatbot. We did not have much trouble creating the Chatbot using ChatGPT, but our technical difficulty was how to publish it. ChatGPT moves the function to plugins, and we needed to host it. Nevertheless, while members were exploring the options in ChatGPT, the other team members were able to use Base44 to create and publish the chatbot, and Mizou afterwards. The problem was resolved accordingly.

AI Use Disclosure

Our team used several AI-powered tools, including ChatGPT, Mizou, and Base44, to support the development of our AI chatbot project, *Boredom Buster AI*.

We used ChatGPT to develop and refine instructions, configure chatbot prototypes, and debug technical issues.

We explored Mizou and Base44 to develop and test the chatbot. These platforms helped us find alternative solutions.

Throughout the project, our team actively participated in idea generation, chatbot configuration, development, testing, and decision-making. AI tools were used to support our work rather than replace independent and critical thinking, collaboration, or evaluation.
